

RHEANA MINDO

Full Stack Software Developer & AI Developer · Python · C# / .NET 8 · AI Services, LLM Agents & Automation
Philippines - GMT+8 · rheanammino@gmail.com · [linkedin.com/in/rheana-mindo](https://www.linkedin.com/in/rheana-mindo) · github.com/rmmindo

SUMMARY

AI + Full-Stack Software Developer with **2+ years across 6 paid roles, including 3 concurrent in 2025**. Cut dashboard creation **61× in production** as sole developer on a FastAPI + LangChain service; **closed an ad-attribution gap that had excluded ~78% of in-window payments** from conversion reporting; built a **Roslyn code-analysis platform** and a **native C# GPU training stack**, shipping **2,320 merged PRs at 96.5%** across 16 repositories. Stack: Python, C# / .NET, FastAPI, LangChain, LangGraph, RAG, Docker, AWS. Drawn to problems where fast feedback loops let teams ship the right thing, not just ship fast.

EXPERIENCE

Software Developer — Iosys Ltd

Remote · Shanghai, China

C# / .NET 8 · Static Analysis · Machine Learning

October 2025 – Present

- **Built the code-analysis platform.** Highest-volume contributor to a .NET 8 Roslyn static-analysis and refactoring platform (**1,672 of 2,996 commits**): a solution-wide extraction engine emitting a typed entity graph, an architecture-metrics engine (**Design Structure Matrix with Tarjan SCC cycle detection**, coupling, Halstead), a **60-route REST API**, and the entire **37-component Blazor WebAssembly dashboard** written solo, including a **hand-written query language** (tokenizer, parser, expression tree) for filtering millions of code entities. Raised dead-code detection accuracy **from ~5% to 96.9%** and rebuilt the cycle scanner from regex to Roslyn semantic analysis, taking false positives **from 88% to 0%** across 457 projects.
- **Architecture enforcement & platform reliability.** Authored **40+ production Roslyn analyzer rules** (~5,700 lines) enforcing architecture at build time across four repositories, plus a 473-line analyzer checking **.csproj/.sln structure at compile time**; drove build warnings **1,982 to 0** and **4,408 to 78**. Became the person who unbroke the build across the estate: **71 PRs repairing a broken solution** across 8 repositories, including single repairs of **4,062 and 3,202 compile errors** from upstream breaking changes, and **161 errors to zero across 335 files in one day**.
- **ML infrastructure & production incidents.** Built a **native C# GPU training pipeline on TorchSharp** — memory-mapped streaming mini-epoch loader, two-stage fetcher/uploader threads, bounded CPU/GPU queues — removing the Python subprocess boundary, plus **NanoGPT, MinGRU and MinLSTM** pipelines and a **Bradley-Terry pairwise ranking trainer** on 1,024-dim CLIP embeddings. Shipped an LLM-driven service generating **1,800 images/day** across CPPN, SD 1.4 and Flux. Root-caused **30,368 silently failed embedding tasks**, a **1000× memory waste** OOM-killing the orchestration server (40 MB to 40 KB per page), and an **O(N²) pagination scan** degrading from 0.84s to 37.68s per page; designed the GPU prefetch architecture after thermal cycling **destroyed 4 GPUs (~\$12,000)**.

AI Automation + WordPress Developer & QA Engineer — Luxe Lips Pty Ltd

Remote · Melbourne, Australia

Python · CI/CD · WordPress Elementor · Regulated Medical Advertising

October 2025 – Present

- **AI automation platform.** Second-highest contributor of eight on the company's internal automation platform — **1,195 commits (40% of the repository)**, **89 of 90 PRs merged** — plus sole author of a separate 131-commit QA system. Authored **9 Claude Code skills** (`/qa``, `/daily-check``, `/code-review``, `/replace``, `/weekly-review``, `/popup-setup``, `/snippet-cleanup``) and **39 Python tools**, compressing **5-hour manual QA passes to 3–10 minutes** (~30–100× faster).
- **Ad-attribution revenue recovery.** Found that the Google Ads and TikTok offline-conversion uploaders selected contacts by **signup date rather than payment date**, silently dropping returning patients who paid in-window — **~78% of in-window payments in the June backfill**. Wrote the payment-date scanner that became the shared source of truth for the window boundary, then hardened the recovery path across seven commits: deterministic order IDs, window-invariant revenue keying, UTC-consistent scoping, and test-mode and future-date guards.
- **Site Health Dashboard (sole author).** Designed and shipped a **Flask service on Google Cloud Run end to end as its only contributor** — every file, both GCS feed publishers, all tests, the reusable deploy workflow and its four callers. Serves booking and compliance health above Core Web Vitals, backed by an **LRU window cache with lock-guarded background builds** and self-reloading placeholders on cold ranges; ranks Lighthouse opportunities by pages affected then savings and sorts worst-mobile-first because mobile is the booking surface. Fails fast at import when `FLASK_SECRET_KEY` is unset to prevent silent open-access deploys.
- **Booking integration, compliance & site quality.** Fixed misrouted GoHighLevel calendars across 3 clinics and 100+ pages; **hit a Monday peak near 100 bookings, previously only seen mid-to-late week**. Built the tiered **AHPRA/TGA compliance scanner** gating a 438-page prescription-medicine advertiser, and drove PageSpeed Insights **red to green** across image compression, font consolidation, JS-error remediation and a cache-layer conflict that had stopped the CDN serving.

Junior AI Developer — Offshorly Ltd

Remote · Quezon City, Philippines

Python · LLM / AI Platform

September 2025 – January 2026

- **Production AI service (sole developer).** Designed and shipped a FastAPI + LangChain microservice with REST endpoints that ingests markdown from upstream Insights and Analytics bots and auto-generates positioned dashboards: **61× speedup** over the prior manual workflow (36 widgets in 35 s vs. ~36 min). Authored **100 of 115 commits (87%)** and **18,040 lines of Python across 94 files**; containerized via Docker and deployed via GitLab CI/CD to AWS in 6 weeks. Hit **pylint 10/10**, **0 SonarQube issues**, and **379 unit tests at 77.8% coverage**; integrated Sentry SDK for production telemetry.
- **LLM agent platform (core contributor).** Shipped **7 production LangGraph subagents** on the SourceFit onboarding AI, including a datasource agent with a dynamic OpenAPI registry (replacing a hardcoded API list), a schema-driven data-validation agent, and a KPI-retrieval agent integrated into the dashboard-selection workflow. **58 of 145 commits (40%)**.

Full Stack Developer — Baybayin Detector

January 2024 – November 2024

Freelance · Remote

Python · OpenCV · GRU RNN · Computer Vision

- Co-developed a **Baybayin Detector** that recognized handwritten characters in real time using Python, OpenCV (Lucas-Kanade optical flow with KLT tracking), and a **GRU RNN model**, deployed with a Tkinter interface.

Full Stack Developer — 2 Weeks

August 2024 – October 2024

Freelance · Remote

MERN · Interactive Game App

- Served as **client-facing point of contact** for a 3-person team building a story-based interactive game app. Handled GoDaddy deployment, coordinated feature assignments across developers, and ensured client satisfaction with the final product.

Software Developer Intern — Azeus Systems Philippines Limited

June 2024 – July 2024

Hybrid · Manila, Philippines

Python · LangChain · AI Knowledge Solutions

- Developed an **AI-powered knowledge solution** optimizing search and information retrieval, including a **RAG chatbot** built with SQLite, LangChain, Ollama, and ChromaDB integrated with Redmine data; drastically faster than the prior workflow of manually searching through Redmine posts and re-posting to surface answers.

LEADERSHIP & PROJECTS

Author — Quantifying Religious Bias in Large Language Models

August 2024 – May 2025

Undergraduate Research · UPLB

Python · PyTorch · LLM Bias Research

- Quantified religious bias in LLMs (**BERT, RoBERTa, DistilBERT, GPT-2, T5-small**) by developing the **Rapid Religious Bias Probe (RRBP)** and adapting a **Religion-Equalizing Loss Function (RELF)** using Python and PyTorch; evaluated bias with RBS, causal/embedding metrics, StereoSet, and CrowsPairs.

Education Committee Head — UPLB Computer Science Society

July 2024 – June 2025

On-site · UPLB, Los Baños, Laguna

Articles · Workshops · Mock Exams

- Published **21 computer science articles**, boosting the COSS page to the 2nd-most-popular section (next to CS Week) and helping grow followers to **6,000+** after my term.
- Initiated peer-driven mock exams for **400+ students** and workshops with alumni and industry experts on career-aligned tech skills, bridging curriculum gaps.

Project Manager — Platform for ICS Events, Scheduling, and Logistics

February 2024 – June 2024

On-site · UPLB Institute of Computer Science

PERN · Vercel · Render · Room Reservation System

- Spearheaded the development of an ICS room reservation system with a team of **19 developers** using PERN, Vercel, and Render; ensured comprehensive documentation and proper code reviews.

EDUCATION

B.S. Computer Science, **University of the Philippines Los Baños (UPLB)**

July 2025

GWA 1.43 (1.0 = highest), **Magna Cum Laude**, Chancellor's & Dean's List, UPLB Kaiban Leadership & Service Award

STEM Strand, **Philippine Science High School – SOCCSKSARGEN (PSHS-SRC)**

May 2021

GWA 1.21, **With High Honors**, Proficiency Award in Computer Science, Excellence Award in Filipino

SKILLS & AWARDS

Languages: Python, C# / .NET 8, JavaScript/TypeScript, C/C++, Java, SQL, PHP/WordPress

AI / ML: LangChain, LangGraph, OpenAI SDK, Claude Code (103 skills), Ollama, ChromaDB, RAG, PyTorch, TorchSharp, CLIP, Stable Diffusion/Flux, TensorFlow, Hugging Face, ONNX, CUDA, scikit-learn, OpenCV

Backend & Web: FastAPI, Flask, Pydantic, REST APIs, Blazor WebAssembly/Razor, MERN/PERN, WordPress, Roslyn, MSBuild, SQLite, DuckDB, MongoDB

DevOps & Tooling: Docker, AWS, GCP Cloud Run, GitLab CI/CD, GitHub Actions, MSBuild, Playwright, pytest, xUnit, pylint, SonarQube, Sentry, Agile

APIs & Integrations: GoHighLevel, Slack API, monday.com, Google Ads API, Meta Marketing API, TikTok Events/Ads API, Google Sheets, PageSpeed Insights API, WordPress REST, GCS, Secret Manager

Research: Author, Quantifying Religious Bias in LLMs (BERT/RoBERTa/DistilBERT/GPT-2/T5-small, RRBP probe + RELF loss function)

Scholarships: DOST-SEI RA 7687, UP SLAS, AWS re/Start, NVIDIA ML

Competitions: Asia Pacific Informatics Olympiad national selection (1 of 38), NOI.PH 2020 Finalist, ICPC Asia Manila, Algolympics, HackForGov 2025 CALABARZON shortlist · CodeBreak 2.0 (Champion), C(old) (St)art 2024 Hackathon (2nd Place), CNSEC CTF (2nd Place)
